

## ED I ANNOUNCEMENT

### concerning the non-obligatory practical examination held during the 14th week

The examination will be held during the longer practical class of the last study week. It is not obligatory, so you would not need to retake it in case you do not attend the midterm. However, it is worth trying, because it gives some experience and/or you may gain exemption from the practical /morphology part of the semifinal examination.

**Time:** December 12, 2019, between 10.15-12.30

**Place:** Dissection rooms (3rd floor)

**Topic list:** Subject matter of the semester

***Musculoskeletal system*** (bones joints, muscles, spaces, together with innervations and blood supply)

***Skull, bones and spaces.***

***Macroscopy of the brain and spinal cord, membranes of the brain*** (= meninges)

**Marking system:** 3 marks will be given

- 1- Limbs and hernia canals (bones, joints, muscles, vessels and nerves )
- 2- Osteology (skull and vertebrae)
- 3- Macroscopy of the brain and spinal cord, meninges (dural innervation DOES NOT form part of the midterm, but the cranial nerve exits will have to be known)

If the average of the above marks is at least a 3, then the students may carry their marks to the semifinal examination where the final mark is calculated upon finishing the written test.

Good luck with the examination!
