4 credit points from obligatory elective/elective subjects must be collected in each semester. See the detailed list of obligatory elective subjects and elective subjects after the 3rd year curriculum.

* The subject must be registered for, as well as completed, in the first or second semesters of the first year.

# The grade influences the qualification of the Diploma.

4 credit points from obligatory elective/elective subjects must be collected in each semester. See the detailed list of obligatory elective subjects and elective subjects after the 3rd year curriculum.

* The subject must be registered for, as well as completed, in the first or second semesters of the first year.

** The subject must be registered for, and must be completed during the first 2 years of studies.

**LIST OF TEXTBOOKS** (The list may change!)

Schoor ISBN-13: 9780723436973 Publication Date: 22/03/2013
3 Gray’s Anatomy for students with STUDENT CONSULT Online Access, 3rd Edition by R. Drake, A. W. Vogl, A. Mitchel Elsevier; 03/04/2014; ISBN 9780702051319
11 Seminar manuals: published on homepage: semmelweis.hu/biokemia/
12 Tóth: Concise Inorganic Chemistry for Medical Students. Bp. Semmelweis Kiadó
13 Laboratory Manual; Medical Chemistry and Biochemistry. Bp. Semmelweis Kiadó
15 Hrabák: Selected Collection of Chemical Calculations and Biochemical Exercises. Bp. Semmelweis -Kiadó

Recommended textbooks:
ANATOMY, HISTOLOGY AND EMBRYOLOGY I – II.

Department of Anatomy, Histology & Embryology
Course Director: Dr. Andrea D. Székely
Dr. Sándor Katz

LEARNING OBJECTIVES

Aims of the lectures in anatomy: Presentation of the important and/or complicated chapters such as introductory chapters, thorax, pelvis, hand, foot, skull, heart, chapters of the visceral organs, central nervous system, organs of special senses, topographical anatomy.

Aims of the lectures in cell biology and histology: Presentation of the cell, basic principles in cell biology (mitosis, cytoskeleton, cellular motility), detailed presentation of the basic tissues (epithelial, connective, muscle and nervous). Complementing gross anatomy with a detailed presentation of the fine structure of organs, including the ultrastructural details together with the molecular background.

Important chapters: basic tissues, viscera, central nervous system.

Aims of the lectures in embryology: Presentation of the early development from the differentiation of the germ cells to the formation of the human embryo (general embryology). Presentation of the development of the organs and functional systems parallel with the gross anatomical and histological lectures including the frequently occurring malformations.

Aims of the practical sessions in the dissecting room: Based on the weekly programs (see separate), students will both observe prosected cadaver specimens (bones, joints, muscles, viscera, brain) and perform dissections on parts of, or on an entire, enbalmed cadaver. Students are supervised by the lab instructors. Bones, joints, muscles and peripheral nervous system will be primarily taught in the dissecting room.

Discussion of the more complicated chapters of embryology is presented on small group discussions connected to the practical sessions in the dissecting room.

Aims of the practical sessions in the histology room: Facilitate the understanding of ground (-epithelial, connective, muscle and nervous) tissues and the fine structure of the organs through the observation and interpretation of histological specimens.

The knowledge of the students will be checked by mid-term tests.
TOPICS OF THE LECTURES:

Lectures: first semester: 3×45 min; second semester: 3×45 min; third semester: 3×45 min; fourth semester: 1×45 min.

**First semester:** Gross anatomy of musculoskeletal system (i.e. bones, joints and muscles), basic cytology, general histology, general embryology, development of the skull, spine and limbs.

**Second semester:** Heart and vessels, lymphatic organs, viscera and body cavities; integrated gross anatomy, cytology, histology and embryology.

**Third semester:** Central and peripheral nervous system, organs of special senses, endocrine organs; integrated gross anatomy, cytology, histology and embryology.

**Fourth semester:** Topographical anatomy of the head, neck, limbs and trunk including body cavities (thorax, abdomen, pelvis), ventral and dorsal regions, cross sectional anatomy.

PRACTICAL COURSE

6×45 min; second semester: 6×45 min; third semester: 4×45 min; fourth semester: 2×45 min

**First semester:** Gross anatomy of the musculoskeletal system (i.e. bones, joints, muscles, vessels ans nerves), basic cytology, general histology, general embryology, development of the skull, spine and limbs.

**Second semester:** Heart and vessels, lymphatic organs, viscera, topography of body cavities; integrated gross anatomy, cytology, histology and embryology.

**Third semester:** Central and peripheral nervous system, organs of special senses, endocrine organs; integrated gross anatomy, cytology, histology and embryology. Topographical anatomy of the dorsal regions of limbs and the trunk, including spinal cord. Topographical anatomy of the viscerocranium, neurocranium and the internal organs of the neck.

**Fourth semester:** Topographical anatomy of the ventral and dorsal regions of the body, including the limbs and body cavities (thorax, abdomen, pelvis), cross sectional anatomy.

**Type of exams:** oral and written.
First semester: semifinal; second semester: semifinal; third semester: semifinal;
fourth semester: final exam from the subjects of the four semesters.

**ECTS credits:** four semesters together: 27 (first semester: 8; second semester: 9; third semester: 7; fourth semester: 3)
LIST OF TEXTBOOKS (The list may change!)

Recommended textbooks:

2. Bräuer: Sobotta Flashcards (Muscles; Bones, Ligaments, and Joints) URBFI, 2013.
1st year 1st semester

English Program

**Anatomy:** Macroscopy and clinically oriented anatomy of the parts of the musculoskeletal system, i.e. osteology, arthrology and myology, together with the vascular and nervous supply of the limbs and the trunk. Skull.

**Histology:** Microscopy of the ground (basic) tissues (epithelia, glandular tissues, connective and supporting tissues, types of muscle tissues. Histology of the corpuscular elements of the blood, cells of the red bone marrow.

**Embryology:** Basic principles of human development, introduction to the clinical embryology. General embryology, including spermatogenesis, oogenesis, fertilization, cleavage, blastulation, formation of germinal layers, body axes, molecular basis of right-left asymmetry, Hox genes, formation of the placenta, fetal membranes. Organ development including the early onset of fetal circulations and the development of the limbs, together with the trunk and the skull. Factors inducing congenital malformations.

**Credits:** 8

**Lectures:** 2,5 hours/week  **Dissection classes:** 4 hrs/week  
**Histology laboratory classes:** 2 hrs/week

| Week 9| 25. Muscle tissue  
26. Gametes, fertilization, cleavage and blastulation  
27. Implantation, bilaminar embryo. Fetal membranes, umbilical cord. Structure of the placenta, placental circulation | Lower limb  
Dissection of the muscles, vessels and nerves of the dorsal side | Blood and red bone marrow                                                                             |
29. Neurulation, folding of the embryo. Body axes, left-right lateralization and asymmetry.  
30. Formation of the primary tissues. Homeobox genes, stem cells | Lower limb  
Dissection of the muscles, vessels and nerves of the ventral side | Smooth, skeletal and cardiac muscle types  
Revision                                                                                       |
| Week 11| 31. Histology of vessels.  
32. Bony framework of the skull. Sphenoid and ethmoid  
33. Temporal bone. Internal and external skull base | Lower limb  
Dissection of the muscles, vessels and nerves of the ventral side | **Midterm test 2:**  
Epithelia, connective and supporting tissue.  
General embryology                                                                 |
| Nov. 14-18|                                                                                                                                                                                                          |                                                                                                        |
| Week 12| 34. Facial skeleton. Orbit, nasal cavity  
35. Skull. Infratemporal and pterygopalatine fossae  
36. Nervous tissue. Glial cells | Bones of the skull  
Internal and external skull bases | Vessels: arteries, veins, arterioles, venules, capillaries.                                              |
| Week 13| 37. Temporomandibular joint, muscles of mastication; muscles of facial                           | Bones of the facial skeleton, mandible. Orbit, nasal cavity, pterygopalatine fossae  
Bones of the skull  
Internal and external skull bases | Nervous tissue                                                                                       |
### Topic lists for the semifinal examination

**Histology**
- Concept of basic tissues
- Definition and classification of epithelial tissue
- Simple epithelia
- Stratified epithelia
- Membrane specializations of epithelia
- Glandular epithelia
- Cells of connective tissue
- Ground substance and fibres of connective tissue
- Types of connective tissue
- Umbilical cord and placenta

Blood and the formed elements of blood
Histology of the bone marrow, maturation of erythrocytes and platelets
Differentiation of granulocytes, lymphocytes and monocytes
Histology of cartilage
Histology of the bone tissue
Intramembranous ossification
Endochondral ossification
Growth and remodeling of bone
Smooth muscle and myoepithelial cells
Skeletal muscle tissue
Cardiac muscle tissue
Histology of the peripheral nervous system (sensory and autonomic ganglia)
Supporting cells in the peripheral nervous system
Nerve fibers, myelin sheath
Motor end-plate

Anatomy
General osteology, classification of bones
Bones, spaces and connections of the skull, external and internal skull bases
Neurocranium, components and cavities (anterior, middle and posterior cranial fossae)

Viscerocranium, components and cavities (walls and connections of the nasal cavity, orbit, oral cavity, pterygopalatine and infratemporal fossae)
Bones of the axial and appendicular skeleton
Vertebrae, ribs, sternum
Bones of the girdles and limbs
General arthrology
Fibrous and cartilaginous joints
Components of the synovial joints
Classification of synovial joints; movements and mechanisms
Structure of the vertebral column, the gross anatomy of the muscles acting upon it
Movements and muscles of the head&neck (atlantooccipital and atlantoaxial joints)
Joints of the shoulder girdle, the gross anatomy of the muscles acting upon them
Shoulder joint, the gross anatomy of the muscles acting upon it
Elbow joint, the gross anatomy of the muscles acting upon it
Structure and movements of the radiocarpal joint, gross anatomy of the muscles acting upon it

Metacarpophalangeal and interphalangeal joints, the gross anatomy of the muscles concerned with the movements

Carpometacarpal, metacarpophalangeal and interphalangeal joints of the thumb, the gross anatomy of the muscles concerned with the movements
Hip joint and the gross anatomy of the muscles concerned with the movements
Knee joint and the gross anatomy of the muscles concerned with the movements
Ankle joint together with the gross anatomy of the muscles acting upon it
Subtalar and talocalcaneonavicular joints, the muscles acting upon them
Temporomandibular joint and the gross anatomy of the muscles acting on it
Architecture and classification of bones
Structure and actions of somatic muscles
Osteofibrous structure of the thoracic cage (bones, joints, ligaments, movements)
Muscles and movements of the thorax
Muscles of the back and nape (occipital region)
Axilla, the quadrangular and triangular spaces
Cubital fossa
Muscles and cross section of the arm
Muscles and cross section of the forearm
Osteofibrous spaces and muscle compartments of the hand, tendinous sheaths
Composition of the pelvis (bones, ligaments and membranes)

Muscles of the buttock, the posterior abdominal wall and the pelvis (external and internal muscles of the hip)
Osteofibrous compartments, muscles and cross section of the thigh
Popliteal fossa
Subinguinal hiatus, vascular and muscular compartments; adductor canal, femoral canal
Osteofibrous compartments, muscles and the cross section of the leg
Structure of the foot, arches of the foot
Osteofibrous compartments of the foot, tendinous sheaths
Muscles of mastication
Superficial muscles of the neck and the muscle triangles
Deep muscles of the neck and the laminae of the cervical fascia
Muscles of facial expression

**Embryology**

- Spermatogenesis, spermiogenesis
- Oogenesis
- Fertilization, cleavage of the zygote
- Blastocyst formation; the bilaminar embryonic disc
- Implantation
- Formation of the intraembryonic mesoderm; the notochord
- Neurulation (neural tube and neural crest)
- Differentiation of the intraembryonic mesoderm; formation and derivatives of the somites
- Derivatives of the intermediate mesoderm
- Lateral plate mesoderm and its derivatives
- Folding of the embryo
- Development of the primitive cardiovascular system, the fetal circulation
- The structure and function of the placenta
- Development of the fetal membranes (chorion and amnion) and the umbilical cord
- Periods of embryonic / fetal life
- Twin formation
- Development of the limbs
- Development of the vertebral column
- Development of the skull
- Development of the skeletal muscular system

---

**1st year 2nd semester**

---

**English Program**

**Anatomy:** Morphology, topography and clinically oriented anatomy of the internal organs (i.e. cardiovascular, gastrointestinal, respiratory and the urogenital systems)

**Histology:** Microscopical structure of the internal organs (cardiovascular, gastrointestinal, respiratory and the urogenital systems)
**Embryology**: Development of the internal organs together with their malformations  
**Credits**: 9  
**Lectures**: 3 hours/week  
**Dissection class**: 6 hours/week  
**Histology laboratory**: 2 hrs/week

TOPICS OF THE SEMIFINAL EXAMINATION

**LYMPHATIC ORGANS**
- Tonsils (anatomy, histology, embryology)
- Spleen (anatomy, histology, embryology)
- Thymus (anatomy, histology, embryology)
- Lymphatic vessels and nodes of head and neck
- Lymphatic vessels and nodes of mediastinum
- Lymphatic vessels and nodes of retroperitoneal space
- Lymphatic vessels and nodes of pelvis
- Thoracic duct and right lymphatic duct

  Microscopic structure of lymphatic system (reticular cells, lymphocytes, plasma cells, antibodies, lymphatic follicles)
  - Microscopic anatomy of lymph nodes

**CIRCULATORY SYSTEM**
- Shape, external features of heart
- Chambers of heart
- Endocardium, ostia, valves of heart
- Skeleton of heart, anuli fibrosi
- Structure of heart wall
- Cardiac muscle, myocardium
- Impulse generating and conducting system of heart
- Pericardium
- Position and surface projections of heart
- Percussion and auscultation (area of cardiac dullness, heart sounds)
- Radiology of heart
- Development of heart tube
- Development of atria (septum primum and secundum, foramen ovale)
- Development of ventricles (interventricular septum)
Pulmonary circulation
Ascending aorta, arch of aorta and its branches
Common and external carotid artery and their branches
Maxillary artery and its branches
Subclavian artery and its branches
Thoracic aorta and its branches
Abdominal aorta and its branches
Coeliac trunk and its branches
Superior mesenteric artery and its branches
Inferior mesenteric artery and its branches
External and internal iliac artery and its branches
Internal pudendal artery and its branches
Superior vena cava and its tributaries
Inferior vena cava and its tributaries
Azygos and hemiazygos veins and their tributaries
Portal vein and its tributaries, portocaval anastomoses
Veins of face and neck
Cutaneous veins and lymphatic vessels of trunk
Microscopic structure of arterial and arteriolar wall
Microscopic structure of capillary wall
Development of aorta and branchial (pharyngeal) arch arteries
Development of great veins (caval, portal, azygos)
Fetal circulation
Microscopic structure of the wall of venules, veins and lymphatic vessels

DIGESTIVE SYSTEM
Oral cavity (divisions, boundaries)
Floor of mouth, sulcus lateralis linguæ
Types and morphology of teeth
Orientation and supporting structures of teeth
Dental arch and dental formula, blood and nerve supply of teeth

Microscopic anatomy of oral tissues (enamel, dentin, cementum, periodontal ligament, alveolar bone, gum)
Development of teeth
Microscopic anatomy of dental development
Tongue (parts, vessels, innervation)
Microscopic anatomy and development of the tongue
Salivary glands (anatomy, histology, embryology)
Isthmus of fauces
Palate, palatine muscles
Development of face, hare lip
Development of nasal cavity and paranasal sinuses
Development of palate, cleft palate
Pharynx, (shape, position, parts, muscles)
Topography of the pharynx, para and retropharyngeal spaces
Structure and development of branchial (pharyngeal) arches
Derivatives of branchial (pharyngeal) arches
Development and derivatives of branchial (pharyngeal) pouches
Branchial (pharyngeal) grooves
Esophagus (anatomy, histology, embryology)
Derivatives of foregut (pharynx, oesophagus, stomach, duodenum)
Stomach (shape, position, parts)
Peritoneal relations of stomach

Blood supply and innervation of stomach Microscopic anatomy of stomach
Microscopic anatomy of the stomach
Duodenum (shape, position, divisions, vessels)
Jejunum-ileum (shape, position, vessels)
Microscopic anatomy of small intestine
Fine structure of the intestinal villi
Rectum, anal canal (shape, position, vessels)
Microscopic anatomy of rectum and anal canal
Liver (shape, position; development)
Gall bladder and biliary passages (anatomy, histology, embryology)
Liver (peritoneal relations, vessels)
Microscopic anatomy of the liver
Circulation of liver, liver sinusoids
Microscopic anatomy of gall bladder and extrahepatic biliary tracts
Pancreas (shape, position, vessels)
Microscopic anatomy and development of the pancreas
Peritoneum omenta, mesentery, omental bursa
Rotation and derivatives of midgut, physiological umbilical hernia
Development of hindgut

**RESPIRATORY SYSTEM**

Nose, nasal cavity (boundaries, nasal meatus, vessels)
Paranasal sinuses (connections, vessels)
Larynx (shape, position, vessels, nerves)
Skeleton and joints of larynx
Laryngeal ligaments (fibroelastic membranes, mucous membrane)
Muscles of larynx, innervation
Microscopic structure and development of the larynx
Trachea and bronchial tree (anatomy, histology and development)
Lung (shape, parts, surfaces, hilum)
Lung (position, topography, vessels, nerves)
Surface projection of pleura and lung
Microscopic structure and development of the lung

**BODY CAVITIES**

Thoracic wall
Pleura, pleural cavity
 Mediastinum (divisions and content)
Diaphragm
Abdominal cavity (divisions and surface projections)
Abdominal wall (muscles, fasciae)
Rectus sheath
Hernia sites
Development and separation of body cavities
Development of the diaphragm
Development of the peritoneum

**UROGENITAL SYSTEM**

Kidney (shape, position, hilum, sinus, capsules)
Kidney (section, vascular architecture)
Microscopic anatomy of kidney
Microscopic anatomy of juxtaglomerular apparatus
Vascular architecture of kidney
Development of kidney and ureter (pronephros, mesonephros, metanephros)
Renal pelvis and calyces
Ureter (anatomy, histology and embryology)
Urinary bladder (shape, position, muscles, vessels)
Microscopic anatomy and development of the urinary passages
Differentiation of the urogenital sinus
Female urethra (anatomy, histology and embryology)
Testis (shape, position, vessels)
Microscopic anatomy of testis, spermatogenesis
Development of testis
Epididymis, vas (ductus) deferens, spermatic cord (anatomy, histology and embryology)
Scrotum, coats of testis
Seminal vesicle (anatomy, histology and embryology)
Prostate (anatomy, histology and embryology)
Development of male genital ducts and glands
Male urethra, bulbourethral gland (anatomy, histology and embryology)
Penis (shape, position, mechanism of erection, vessels, nerves)
Microscopic anatomy of penis and male urethra
Pelvic floor, male perineum
Hernia canals (inguinal and femoral)
Development of the male external genital organs
Ovary (shape, position, vessels)
Microscopic anatomy of ovary, oogenesis
Microscopic anatomy of corpus luteum
Development of ovary
Uterine tube (shape, position, vessels; histology, embryology)
Uterus (shape, parts, wall, cavity)
Uterus (position, supporting structures, vessels)
Broad ligament (lig. latum) and its components
Microscopic anatomy of uterus, menstrual cycle
Vagina, female perineum

External female genital organs (mons pubis, labia, vestibule of vagina, greater vestibular gland, vessels)
Development of female genital tracts
Microscopic anatomy of vagina and external genitalia
Development of the female external genital organs

**BASICS OF BIOSTATISTICS AND INFORMATICS**

MEDICAL CHEMISTRY

Department of Medical Chemistry, Molecularbiology and Pathobiochemistry

First Semester

credits: 6

Director of the course:
Prof. Gábor Bánhegyi M. D., Ph. D., D. Sc.

Description of the curriculum
The principal aim of the course is to prepare students for the understanding of Biochemistry and Molecular Biology. This requires a firm knowledge of the basics of general, organic and inorganic chemistry.

I. General Chemistry

Structure of atoms, ions and molecules. Chemical bonds
Relation of atomic radius, ionization energy, electron affinity and electronegativity to the periodic table. Ionic bond, ion radius, ions. Covalent bonding, \( \sigma \) and \( \pi \) bonds, hybrid orbitals, hybridization of carbon. Electron pair repulsion, geometry of molecules, bond angle. Molecular orbital theory.

Physical states. Types of crystals, characteristic crystal lattices.

**Solutions, laws of aqueous solutions, their biological and medical aspects**

**Electrolytes**

**Electrochemistry**

**Thermodynamics**

Relation between electromotive force and free enthalpy change. Exergonic and endergonic processes. The equilibrium constant. The direction of the processes and its relation to free energy change.

Chemical kinetics

Reaction kinetics, rate of reaction, order and molecularity. Half-time of reactions. The van’t Hoff rule. Activated complex, transition state, activation energy. The Arrhenius equation. Catalysis, catalysts. Reversible processes, the law of mass action, equilibrium constant and its relation to free energy change. Consecutive reactions, the importance of rate-limiting steps in metabolic processes.

II. Inorganic chemistry

Properties of non-metals

Properties of metals

Alkali metals and their compounds. Alkali earth metals and their compounds, the biological significance of calcium and magnesium. Earth metals. Heavy metals and their biological importance. Precious metals. Medically important metals and metal-containing compounds.

III. Organic chemistry

General properties of organic compounds

Classification of hydrocarbons based on their carbon backbone

Functional groups. Classification and chemical characterization of compounds containing various functional groups

I. Classification of organic compounds according to their functional groups.
   Halogenated hydrocarbons, their physicochemical properties.

II. Organic compounds containing hydroxyl groups. Classification. Alcohols, physical properties, chemical reactions. Enols and phenols, their chemical reactions. Synthesis of ethers, their reactions.

III. Oxo compounds: classification, nomenclature, physical properties. Chemical reactions of aldehydes and ketones, nucleophilic addition reactions. Condensation reactions of oxo-compounds, oxidation reduction, substitution on the carbon chain.

V. Organic compounds containing sulfur: thiols, thioethers and thioethers, their synthesis and physicochemical properties.

VI. Organic compounds containing nitrogen: classification, physicochemical properties of nitro compounds. Amines, classification, synthesis, basicity. Important chemical reactions of amines (e.g. Schiff base formations). Amides of carbonic acids.

Lectures and practical lessons
Two lectures and a laboratory lesson (practical) are held every week; schedules can be found in separate uploaded files. Students are expected to keep records and write protocols on the performed experiments (suggested structure: aim of the experiment, applied methods/devices/reactions, results and evaluation). Hand-written protocols might be presented either at the end of the lab lesson or at the beginning.
of the next practical to the lab teacher. Students might get two points for each acceptable protocol, and points collected this way are added to the total score they achieve in the corresponding midterm exams. Thus, bonus points collected in weeks 2 – 4 (at most 6) are added to the scores of midterm I and those obtained in weeks 7 – 11 (at most 10) to midterm II, respectively. Importantly, these bonus points not only improve your midterm grades but might help you pass the midterm, too.

Requirements for acknowledgement of the semester
(1) Participation in the laboratory practicals is obligatory; students should sign the attendance sheets at the end of the practicals. In case of more than three absences from the practicals for any reason, the semester will not be acknowledged and the student is not going to be allowed to sit for the semifinal exam. Missed practicals can be completed only in the same week at another group; certificate from the host teacher should be presented by the student to the assigned teacher.
(2) It is compulsory to pass both midterm examinations; see next paragraph for details.

Midterm examinations
Two midterm written examinations will be held in weeks 6 and 12 of the semester, respectively, during regular laboratory practicals. Midterm tests consist of four theoretical questions (10 points each) and four problems (calculations; 10 points each). The material of midterm I covers that of lectures given in the first 5 weeks, while midterm II is based on the lecture material of weeks 6-11. Midterm tests will be evaluated by lab teachers and marked as 0, 2, 3, 4 or 5. These ’midterm bonus points’ are added to the scores achieved at the semifinal exam (see below).
Grading of midterms (total scores including points obtained from lab reports):

<table>
<thead>
<tr>
<th>Total Points</th>
<th>Grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>0 – 40</td>
<td>0</td>
</tr>
<tr>
<td>41 – 50</td>
<td>2</td>
</tr>
<tr>

<td>3</td>
</tr>
<tr>
<td>61 – 70</td>
<td>4</td>
</tr>
<tr>
<td>71 or more</td>
<td>5</td>
</tr>
</tbody>
</table>

Passing both midterms is a prerequisite to acknowledgement of the semester.
Failed midterms might be retaken twice.
The first retake is written, comprising four theoretical questions and four calculations. It should be performed in week 7 (retake of midterm I) and week 13 (retake of midterm II), supervised by the student’s own lab teacher.
Students having failed the first retake might sit for the second retake in the last week of the semester. The second retake is an oral exam conducted by an examination committee. Students having failed the first retake of both midterms I and II will be examined in the material of both midterms at the same time.
Semifinal examination
Only those students who have fulfilled both acknowledgement criteria, thus obtained an official electronic Neptun signature, are entitled to sit for the semifinal exam.

The semifinal is a written exam that consists of two theoretical parts and a practical exam.

First theoretical part (50 min): drawing 10 structures within 15 min (both inorganic and organic, 1 point each), answering two short questions (providing definitions of two "important terms" taken from the topic list; one point each) and solving four chemical calculations (2 points each).

The list of structures to be memorized can be found on the last page of this document. Please note that any inorganic base or salt might be asked that can be formed by combining any cations and anions provided there. Moreover, any normal or branched-chain alkane, alkene or alkyne (up to eight carbon atoms) can be asked such as 2,3-dimethyl-pentane, 3-methyl-2-hexene etc.

Second theoretical part (80 min): 40 multiple choice questions (1 point each).

Lab exam (practical exam) (15 min): writing an essay on a laboratory experiment performed during the semester (evaluation: 0, unacceptable; 1 point, minor mistakes; 2 points, clear, detailed and correct). Exact quantities (mass, volume of reagents, incubation times etc.) are not expected here.

Therefore, the maximal score is 20 + 40 + 2 = 62.

The exam is unsuccessful with
- 10 or less points in part 1, OR
- 20 or less points in part 2, OR
- 0 point from the practical exam.

Students who pass both part 1 AND part 2 but fail the practical essay have to retake only the practical essay when they repeat the semifinal exam. Those who want a better grade are entitled to rewrite the first 2 parts as well; however, risking that they might perform worse.

Students who pass the practical exam but fail either part 1 or part 2 (or both parts) are obliged to retake both theoretical parts but not the practical exam.

In case of successful exams, i.e. when both theoretical units and the practical exam are successfully completed (at least 11, 21 and 1 points are obtained in blocks 1, 2 and the practical essay, respectively), bonus points from the midterms (at most 10) are added to the scores acquired during the exam. Therefore, successful semifinals are evaluated as follows:
- 33-39 points = grade 2 (pass)
- 40-49 points = grade 3 (satisfactory)
- 50-59 points = grade 4 (good)
- 60-72 points = grade 5 (excellent).

It is possible to write the practical essay in week 14, in the first 15 minutes of the last laboratory practical of the semester. Students successfully completing this test (getting 1 or 2 points) are exempted from writing the practical exam at the semifinal exam.

It is to note that this is an extra opportunity for passing the practical exam prior to the beginning of the exam period and in case of failure the semifinal exam should proceed as outlined above.
For CV and FM students
CV students might keep their partial results for the CV exam (either the lab or the theoretical part). In contrast, FM students have to retake the lab or the theoretical part of the exam even if they successfully passed either of them previously.

Competition
Those students who have passed BOTH midterm examinations with a grade of 3 or better are entitled to participate in the competition. Eligible students should sign up at their lab teachers. The competition is organized in week 14 (the exact date and venue will be announced later). It is based on the whole material of the semester and has the same format as the written semifinal except that no lab essays will be asked. Students achieving at least 75% of the maximal score will be exempted from the semifinal exam.

Exemption from the semifinal exam
Students who learned general, inorganic and organic chemistry at a university level prior to the commencement of their studies at Semmelweis University might sit for an exemption exam that takes place in the middle of September. Students are kindly asked to present their official documents (transcripts with exam results and a detailed syllabus on the courses they completed) to the tutor (Gergely Keszler, EOK building, room 2.132). The exemption exam encompasses parts 1 and 2 of the semifinal (structures, short definitions of important terms, calculations and multiple choice questions); lab essays will not be asked.

Registration and modification of examination dates:
Electronically, via the Semmelweis University Neptun System. Retakes are not possible within 3 days following the exam. All our examination rules comply with the official examination regulations of the Semmelweis University.

Recommended textbooks, manuscripts, handouts:
For General chemistry: Ebbing-Gammon: General Chemistry, latest edition
For Mortimer: Chemistry
For Inorganic chemistry: Tóth: Concise inorganic chemistry for Medical Students (manuscript)
For Laboratory: Hrabák: Selected Collection of Chemical Calculations and Biochemical Exercises (2007); Hrabák: Laboratory Manual - Medical Chemistry and Biochemistry (third edition, 2007)
Manuscripts and textbooks can be purchased in the bookshops of Semmelweis Publisher (on the ground floor of the NET and EOK buildings).
TOPIC LIST AND IMPORTANT TERMS

GENERAL CHEMISTRY TOPICS (1 – 37)

Note: Chapter numbers correspond to the 9th edition of D.D. Ebbing – S. D. Gammon: General Chemistry (2009)
Important terms are written in italics.

ATOMIC STRUCTURE
(Ebbing: Chapter 7. Quantum theory of the atom)
   - Nucleus, electrons, proton, neutron, atomic number, mass number, atomic weight, isotopes, atomic orbitals, principal quantum number, angular momentum quantum number, magnetic quantum number, spin quantum number

ELECTRON CONFIGURATION OF ELEMENTS
(Ebbing: Chapter 8. Electron configurations and periodicity)
2. Electronic structures of atoms: electron configurations and orbital diagrams.
3. Periodic properties of the elements (atomic radius, ionization energy and electron affinity) and the electronic structure of main-group elements.
   - Orbital diagram, Pauli exclusion principle, building-up (Aufbau) principle, Hund’s rule, noble gas core, pseudo-noble-gas core.
   - Periodic law, effective nuclear charge, first ionization energy, electron affinity; electronegativity
   - Skills: Writing the orbital diagram for the ground state of any atom if the mass number is given.

IONIC AND COVALENT BONDING
(Ebbing: Chapter 9. Ionic and Covalent bonding. Chapter 10: Molecular geometry and chemical bonding theory)
4. Formation of ionic bonding and description of ions.
5. The covalent bond. Transition between ionic and covalent bonding.
   - Cation, anion, lattice energy, ionic radius.
   - Bonding and non-bonding (lone) electron pairs, coordinate covalent bond, octet rule, multiple bonds, polar covalent bond, electronegativity, delocalized bonding, resonance, bond length (bond distance), covalent radius, bond energy.
   - Skills: Writing the Lewis-electron-dot symbols and valence-shell electron configurations for the atoms of the second and third periods.
INTERMOLECULAR FORCING
(Ebbing: Chapter 11: States of matter: Liquids and solids/11.5. Intermolecular forces: explaining Liquid properties)
   Dipole-dipole forces, London (dispersion) forces, Van der Waals forces, hydrogen bonding.

CHEMICAL EQUILIBRIA
(Ebbing: Chapter 14: Chemical equilibrium)
7. Chemical equilibria (basic principles): The equilibrium constant. The law of mass action. Predicting the direction of a reaction.
   Changing the reaction conditions: LeChatelier principle.
   Chemical equilibrium, equilibrium constant, law of mass action, homogenous equilibrium, heterogenous equilibrium, reaction quotient, LeChatelier principle.
   Exergonic vs. endergonic reactions, reversible vs. irreversible reactions.

CONCENTRATIONS OF ACIDS AND BASES
(Ebbing: Chapter 3: Calculations with chemical formulas and equations: Mass and moles of substance; Chapter 4: Molar concentrations; Diluting solutions.
Chapters 15 and 16: Electrolytes; Acids and Bases, Neutralization. Equivalents and normality)
8. Concentrations (basic principles): The mole concept. Neutralization. Calculation of various concentrations (percentage concentrations, molarity and normality).
   Molecular weight, formula weight, molar mass (mole, “mol”), Avogadro’s number, molar mass, mass percentage, molar concentration (molarity, M), titration

ACID-BASE CONCEPTS
(Ebbing: Chapter 15. Acid-base concepts; Chapter 16: Acid-base equilibria; Lecture)
monoprotic and polyprotic (phosphoric and carbonic acid) weak acids.

15. Acid-base properties of salt solutions (hydrolysis). Anion-hydrolysis (example: acetate) and cation-hydrolysis (example: ammonium ion). pH of acidic salts (examples: NaHSO₄, NaHCO₃, NaH₂PO₄ and NaHPO₄).
Acid (Arrhenius theory), base (Arrhenius theory), self ionization of water, ion-product constant for water (water product, Kw), pH, pOH, the pH scale; acid-base titration curve, equivalence point.
Acid (Bronsted-Lowry theory), base (Bronsted-Lowry theory), conjugate acid-base pair, Lewis-acid, Lewis base.
Acid ionization (dissociation) constant, base ionization (dissociation) constant, degree of ionization.
– common ion effect, buffer, Henderson-Hasselbalch equation
– acid-base indicators, buffer capacity (acid capacity and base capacity)

Skills: Drawing the titration curves of strong and weak (monoprotic and polyprotic) acids/ bases
(Lecture): Intracellular and extracellular buffer systems of the body, average charge of phosphoric acid at various pH, components of the bicarbonate buffer in the blood, role of the ventilation in pH stabilization role of the red blood cells in pH stabilization, role of the kidney in pH stabilization, metabolic acidosis, metabolic alkalosis, respiratory acidosis, total acidity of the urine; anion-hydrolysis (example), cation-hydrolysis (example), cation and anion hydrolysis (example), acidic salts with acidic pH (example), acidic salts with basic pH (example)

SOLUBILITY AND COMPLEX IONS
(Ebbing: Chapter 17: Solubility and complex-ion equilibria)

Solubility, solubility product constant (Kₛᵒ), ion product (Q), conditions for precipitation
Complex salts, double salts, ligands, central ions, coordination number of complexes, unidentate-, bidentate-, ambidentate- and multidentate ligands (examples), chelate complexes (examples), Lewis acid-base theory, geometric isomerism, chiral isomerism, crystal field theory, high and low spin complex; structure of EDTA, biological complexes of iron and calcium, EF hand protein motif

SOLUTIONS

23. **Boiling point and freezing point of solutions.** Molal freezing point depression and boiling point elevation of aqueous solutions. Colligative properties. Anomalous behavior of ionic solutions, interionic attractions, van’t Hoff factor. Formula mass of ionic compounds. Determination of concentration or molar mass by freezing point depression measurements.

24. **The phenomenon of osmosis.** Osmotic pressure, dependence on temperature, solute concentration and ionic dissociation. Isotonic, hypertonic and hypotonic solutions. Determination of molecular mass or concentration by measuring osmotic pressure. Biological and medical significance of osmosis.

---

**THERMODYNAMICS**

(Ebbing: Chapter 6: Thermochemistry; Chapter 18: Thermodynamics and Equilibrium)

25. System and surroundings. Internal energy, mechanical work and reaction heat, the first law of thermodynamics. Enthalpy and Hess’s law. Standard enthalpy change.

26. **Enthalpy change of physical processes (phase transitions, temperature change, solution process).**

28. Entropy change, spontaneous and reversible processes, the 2nd law of thermodynamics. The 3rd law of thermodynamics, absolute and standard entropies.

Internal energy, work, heat, enthalpy change, standard enthalpy change.
Standard enthalpy of fusion/vaporization/sublimation/solution/solvation, lattice enthalpy, molar heat capacity.
Standard enthalpy of formation/combustion, average bond enthalpy.
Entropy change, standard and absolute entropy.; Standard free enthalpy change, exothermic-, endothermic-, exergonic-, endergonic reactions.
First, second and third laws of thermodynamics.

REACTION KINETICS
(Ebbing: Chapter 13: Rates of reaction)
30. Spontaneity and speed of chemical reactions. Reaction rate. Rate equation, rate law. Rate constant and its unit, initial rate. Collision and transition state theories of the mechanism of chemical reactions.
32. Reaction rate and temperature. Activation energy. Potential energy diagrams. Catalysis. Enzymes as biocatalysts; strong specificity of enzymes
reaction rate, rate law, rate constant, rate equation, initial rate, collision theory, transition-state theory, frequency factor, reaction order, molecularity, reaction mechanism, mono- bi- and termolecular reactions, first, pseudo-first, second, zero orders, overall order of a reaction, rate determining step, half-life.
catalysis, catalyst, activation energy, activated complex, Arrhenius equation; energy diagrams of catalysed and non-catalysed reactions, homogeneous and heterogeneous catalysis, chemisorption, enzyme, substrate, stereospecificity

ELECTROCHEMISTRY
(Ebbing: Chapter 19: Electrochemistry; Lectures)
33. Voltaic cells: Notation for a voltaic cell. Electrode potentials (reduction potentials) and the electromotive force. Normal and standard electrode potential. Calculation of equilibrium constants from the electromotive force.
34. Dependence of electrode potentials on concentrations: the Nernst equation. Concentration cells. The hydrogen electrode. Measurement of pH, the glass electrode.
36. Direction of redox reactions. Biologically important redox systems (examples for reversible and for irreversible redox reactions).
37. Specific and equivalent conductance. Determination of the degree of dissociation and the ionization constant by conductometry. (Practice book and lecture)
Voltaic (galvanic) cell, half cell, salt bridge, electromotive force, standard electrode potential, Nernst equation, concentration cell, hydrogen electrode, glass electrode, non- polarizable electrodes, calomel electrode, silver electrode; specific and equivalent conductance; Daniell ele-
INORGANIC CHEMISTRY TOPICS (1 – 14)

Important terms are written in italics.

1. Alkali and alkaline earth metals and their compounds.
   structure of sodium and potassium chloride, hydroxide, alkali and alkali earth metal ions, structure of magnesium and calcium chloride, sulfate and carbonate, role of calcium in biological systems, structure and utilization of barium sulfate

3. Carbon. Allotropes of carbon. CO and carbon dioxide, carbonic acid, cyanides. different hybridization of diamond and graphite, coordinative bond in CO, CO as a poison, structure of carbon dioxide, green house gases, equilibrium of carbonic acid, hardness of water caused by alkali earth metal hydrocarbonates; cyanides as poisonous compounds.

4. Silicon and derivatives. Tin and lead and their compounds. silicon as semiconductor, poisonous effects of lead, removal of lead ions by EDTA, different oxidation states of Sn and Pb

   structures of nitrite/nitrate, oxides of nitrogen, ammonia, possible oxidation states of nitrogen.

   different phosphoric acids, biological role of phosphates

7. Oxygen and its compounds: allotropes, oxides, peroxides, superoxides.
   ozone, ozone shield, free radicals of oxygen, Haber-Weiss reaction, Fenton-reaction.

   surface tension, maximal density at 4°C, hydrogen bondings and their role in the high boiling point, constant and removable hardness of water

   structures of sulfide, sulfite, sulfate, thiosulfate ions, practical aspects of the dilution of sulfuric acid

    electron configuration of halogens, H-bond formation of fluorine in compounds, fluorine in teeth, structures of the oxyanions of bromine and iodine, Lugol solution, reaction of iodine with starch, principles of iodometry

11. Chlorine and its compounds.
    structures of oxyanions of chlorine, formation of NaOCl, properties of HCl and NaCl

    isotopes of hydrogen, ions of hydrogen, explosive mixtures of hydrogen, electron configuration of nobloe gases, arteficial air, composition of
   role of KMnO4, different oxidation states of iron, organic iron compounds, poisonous effect of heavy metals, photosensitivity of silver halogenides, utilization of platinum electrodes

14. Nomenclature of inorganic compounds.
   system of the endings of differently oxidized salts of inorganic acids, nomenclature of acidic and basic salts, names of compounds containing more identical atoms or ions.

**ORGANIC CHEMISTRY TOPICS (1 – 22)**

Important terms are written in italics.

**COVALENT BONDING IN ORGANIC COMPOUNDS**
(Chapter 2)
1. The central role of carbon atoms in organic chemistry. Chemical bonds. Hybridization of atomic orbitals, the hybrid states of carbon, resonance and delocalization in organic compounds.
   *sp, sp2, sp3 hybridization, promotion of carbon, aromatic compound, antiaromatic compounds, benzenoid compound*

**DIPOLE MOMENTUM AND GENERAL ACID-BASE PROPERTIES OF ORGANIC COMPOUNDS**
(Chapter 3)
   *Dipole momentum, Debye unit, polar covalent bond, resonance structure, resonance energy, ring strain, torsional strain*

**THE STERIC STRUCTURE OF ORGANIC MOLECULES. ISOMERISM AND TERMINOLOGY.**
(Chapter 4)
3. Principles of constitution, configuration and conformation isomerism
4. Types of constitution isomerism: branching (backbone) isomerism, position isomerism and tautomerism.
5. Configuration in organic chemistry: geometric (cis-trans) and optical (stereo) isomerism. Chirality and prochirality, stereogeneic (chiral) centers, enantiomers and diastereomers, Racemic mixtures and meso compounds.
6. Terminology of chiral compounds: relative and absolute configuration, the D/L and the R/S systems. Stereochemical numbering.
7. Conformation in organic chemistry
   *Configuration, conformation, connectivity, isomer, constitutional isomer, chiral molecule, achiral molecule, angle strain, asymmetric carbon, absolute configuration, relative configuration, enantiomers, meso compound, Newman projection, optically active compound, plane of*
symmetry, plane polarized light, prochiral, R/S system, D/L system (Fisher projection), racemic mixture, stereogenic center, geminal substituents, vicinal substituent, disjunct, conjugated double bonds, cumulated double bonds, isolated double bonds, prochirality, diastereomers

CLASSIFICATION OF ORGANIC COMPOUNDS
(Chapter 5)
8. Classification of organic compounds according to the main functional groups
9. Reaction types and reaction mechanisms in organic chemistry.
   SN1 reaction, SN2 reaction, functional group, homologous series, homolytic bond breaking, heterolytic bond breaking, nucleophile reactant, electrophile reactant, electrophilic, nucleophilic, radical reactions, addition, substitution, elimination, Markownikow rule, 1-1 example for fundamental reaction types in organic chemistry (e.g. nucleophile addition), rearrangement reactions, regioselective reaction

MAJOR FUNCTIONAL GROUPS AND THEIR REACTIONS
(Chapter 6)
10. Structure and reactions of alkanes: nomenclature, conformational analysis, radical reactions.
13. Structure and reactions of homoaromatic compounds. Benzene and polycyclic compounds. Resonance stabilization in aromatic compounds and the Huckel’s rule.
14. Mechanism of electrophilic substitution of aromatic compounds. Effect of substituents of the aromatic ring on the reaction rate and product formation in further electrophilic substitution type of reactions.
15. Classification, structure, physical and chemical properties and reactions of organic hydroxyl compounds (alcohols, enols, phenols). Formation of ethers and esters.
16. Classification and nomenclature of ethers (epoxides, hemiacetals, acetals).
   Electronic structure of open-chain and cyclic ethers; physical properties, miscibility, chemical reactivity: coordinative bonding, basicity, Zeisel test, nucleophilic attack of epoxides, peroxyethers.
17. Structure, nomenclature, chemical-physical properties, biological role and characteristic reactions of carbonyl compounds (aldehydes, ketones). Important nucleophilic addition reactions (addition of simple inorganic molecules; dimerisation, polymerisation, aldole formation, acetal formation, formation of ketimines, oximes, hydrazones, Schiff’s bases).
18. The electronic structure of the carboxylate anion, the most important mono-, di- and tricarboxylic acids. Condensation type reactions of organic...
acids: ester- and anhydrid-formation, lactones. Decarboxylation of organic acids. The decarboxylated products of amino-,
hydroxy- and keto acids.
20. Organic thio-compounds. Thioalcohols, thioethers, sulfinic and sulfonic acids.
acetylation, reaction with HNO2, deamination, transamination.
22. The most important representatives of organic amines in living organisms. The amine derivatives of carbonic acid: carbamoyl-P, urea,
guanidine, creatine, barbiturate.

Alkane, alkene, alkyne, Huckel’s rule, olefin, paraffin, alcohols, enols, phenols, bond order, alkoxy, aryloxy, tautomer, α-unsaturated alcohol,
ether formation, ester formation, dehydration, epoxide, hemiacetal, acetal, Zeisel test, peroxoethers, thiol, thion, thioether, disulfide, sulfide,
sulfoxide, sulfone, sulfonate, carbonyl group, aldehyde, ketone, quinone, β-unsaturated carbonyl compounds, amphoterism, desmotropism,
protective groups, dimerization, paraformaldehyde, glycosides, furanose, pyranose, Schiff-base, hydrazine, oxime, strong and mild oxidation of
oxo-compounds; Tollens test; Fehling test, Cannizzaro reaction
ester, anhydride, amide, halogenide, azide, aminoacid, fatty acid, carboxylate, dimerization of carboxylic acids, nucleophilic acylation, alpha
substitution, driving forces of esterification, cyclic esters, soaps, transesterification, transamination, polyesters
nitroso, nitro, oxime, amine, imine, amide, nitrile, isonitrile, cyanate, isocyanate, imide, hydrazine, hydrazide, azo, electron distribution within
the most important functional groups: acid-base properties (primary, secondary... amines), conjugation effect, amphoterism of imidazole,
structure of the amide bond, restricted rotation and isomerism, tautomerism of nucleotide bases, Schiff-base formation, isocyanate formation

TOPICS FOR THE LAB EXAM (1 – 19)
1. The factor of titrating solutions; factorization of HCl
2. The factor of titrating solutions; factorization of NaOH
3. Titration of strong acids with NaOH
4. Titration of acetic acid with NaOH
5. Titration of gastric fluid
6. Principles of the electrometric titration of phosphoric acid and plotting the titration curve
7. Determination of Cl– concentration by means of precipitation titration
8. Permanganometry: principles, factorization of the titrating solution
9. Permanganometry: determination of Fe2+ concentration
10. Iodometry: principles, factorization of titrating solution
11. Iodometry: principles, determination of sodium hypochlorite concentration
12. Complexometric titration: determination of unknown Cu2+ concentration
13. Complexometric titration: determination of Ca2+ and Mg2+ concentration of the same solution
14. Conductometry: description of the conductometer, determination of the cell constant
15. Determination of the ionization constant of acetic acid by conductometry
16. Spectrophotometry: determination of the absorption spectrum of phenol red and plotting the calibration curve of the dissociated phenol red anion
17. Spectrophotometric determination of the ionization constant of phenol red
18. Electrochemistry: measurement of the electromotive force of the Daniell element; studying the effect of electrolyte concentration on the electromotive force
19. Electrochemistry: experiments with iron redox electrodes as well as with redox systems of biological relevance

The 10 structures asked in the semifinal exam will be selected from the following list

**Inorganic acids and other compounds:** sulfuric acid, sulfurous acid, nitric acid, nitrous acid, hydrochloric acid, hydrobromic acid, hypochlorous acid, chlorous acid, chloric acid, perchloric acid, hypobromous acid, bromous acid, bromic acid, perbromic acid, hydrogen cyanide, metaphosphoric acid, orthophosphoric acid, boric acid, carbonic acid, water, ammonia, hydrazine, hydroxylamine, hydrogen peroxide, superoxide anion, pyrophosphate anion, hydrogen sulfide, carbon monoxide, carbon dioxide, nitrous oxide, nitric oxide, sulfur dioxide, sulfur trioxide, hydroxyapatite, fluoroapatite, ferrous ammonium sulfate

**Any inorganic salts and bases consisting of the following cations and anions:**
- **Cations:** ammonium, sodium, potassium, magnesium, calcium, ferrous, ferric, cuprous, cupric, zinc, silver, aluminium, mercurous, mercuric, manganese
- **Anions:** hydroxide, oxide, fluoride, chloride, bromide, sulfide, sulfate, sulfite, hydrogen sulfate, thiosulfate, nitrate, nitrite, hypochlorite, chlorite, chlorate, perchlorate, hypobromite, bromite, bromate, perbromate, cyanide, phosphate, monohydrogen phosphate, dihydrogen phosphate, carbonate, hydrogen carbonate (bicarbonate), permanganate, chromate, ferricyanide

**Hydrocarbons:** alkanes, alkenes and alkynes (up to carbon number 8, both normal- and branched-chain isomers); 1,3-butadiene, 2-methyl-1,3-butadiene (isoprene)

**Aromatic rings:** benzene, naphthalene, phenanthrene, pyrrole, thiophene, furane, thiazole, oxazole, imidazole, pyrazole, pyridine, pyrane, pyrazine, pyrimidine, purine, indole, pteridine, acridine

**Small organic compounds:** methanol, ethanol, propanol, isopropanol, n-butanol, ethylene glycol, glycerol, inositol, phenol, diethylether, formaldehyde, acetaldehyde, acetone, mercaptoethanol, aniline, urea, guanidine
Organic acids: formic acid, acetic acid, propionic acid, butyric acid, valeric acid, caproic acid, oxalic acid, malonic acid, succinic acid, glutaric acid, maleic acid, fumaric acid, lactic acid, β-hydroxybutyric acid, pyruvic acid, acetoacetic acid, citric acid, cis-aconitic acid, isocitric acid, α-ketoglutaric acid, malic acid, oxaloacetic acid

Types of bondings and derivatives: ether, phenolether, thioether, ester, lactone, thioester, anhydride (including mixed and phosphoric acid anhydrides), hemiacetale, hemiketale (cyclic forms included), Schiff-base, oxime, hydrazone, hydroxamic acid, amide, thiol, sulfinic acid, sulfonic acid, sulfoxide, acyl chloride.

Laboratory programs are on the 1st floor, Department of Medical Chemistry, Molecular Biology and Pathobiochemistry, „D” passage.

MEDICAL BIOCHEMISTRY I.

Department of Medical Biochemistry

Second (spring) semester

Neptun code: AOKOBI463_1A
Credit: 3
Director of the course: Tretter László MD, PhD, DSc
End semester requirement: practice mark
The aim of the curriculum is to learn and understand the structure-function aspects of biologically important macromolecules (proteins, nucleic acids, lipids and complex carbohydrates) and that of their building blocks (amino acids, nucleotides, sugars and lipids). The enzymology module deals with the mechanism and efficiency of the in vivo biochemical reactions focusing on their organization into metabolic pathways, their regulation and effectiveness. The bioenergetics module focuses on the energy and metabolite fluxes of the human body and also settle the basis of the thermodynamically approach of intermediary metabolism.

The role of proteins in the living world. The chemical structure of proteinogenic amino acids. – Nucleotides and their carbohydrate components. The peptide bond. The primary, secondary and tertiary structure of proteins. Acid-base characteristics of amino acids, their titration curves. The isoelectric point of amino acids and their calculation.

General characteristics of enzymes. The thermodynamics of enzymatic reactions. Activation energy, transitional state. Isoenzymes. The role of coenzymes in the enzymatic reactions. Biochemical calculations

Different levels of the regulation of enzymatic activities: regulation through compartmentalization, by the transcriptional regulation of enzyme protein expression and with the modification of their catalytic activities. Regulation of enzyme activity by proteolysis. The enzyme kinetics and thermodynamics of metabolic pathways. The strategy to find the regulated step(s) of metabolic pathways. Enzymology I. The most important carbohydrates of the body and their presence in foodstuffs. Enzymology 2.

The most important lipids of the body and their distribution in various foodstuffs. Role of the structures of carbohydrates and lipids in the human body

The thermodynamics of biochemical pathways Reversible and irreversible reactions. The coupling of endergonic and exergonic reactions in the
The connections of mitochondrial energy production and different biochemical pathways of cells.
The reactions of the citric acid cycle and the regulation of the pathway. Bioenergetics II.
The sources of acetyl-CoA in the citric acid cycl

Participation at the practices and consultations are compulsory. There will be no make-up practices or consultations offered. If you miss more than three practices or consultations (unexcused absence) your semester will be taken as invalid. You must be on time when practices are started. Arriving more than ten minutes later than the start time that practice or consultation will be taken as a missed one (you can stay in the room and listen to the teacher or lecturer but cannot carry out the experiment at that occasion).
At each practice between the third and twelveth weeks small quizzes will be written (altogether ten times). The questions will be selected from the previous weeks’ lecture and practice material. There are no make-ups given. Answers will be graded as passed (between 55-100%) or failed (below 55%) by your lab teacher. At the end of the semester failed quizzes can be corrected in an exam having a written and an oral part. At least eight successful quizzes have to be collected in order to get a signature validating your semester. Grading ≥75% excellent (750 points from the possible 1000); 74 – 55% satisfactory; 54 – 0% fail. Failed students have to repeat the semester. Ps. Unexcused absences from a quiz will be graded as zero. If you have an excused absence (based on written or other verifiable evidence) from a quiz, your final grade will be based on a percentage of the total possible points for the quizzes you have taken.

MOLECULAR CELL BIOLOGY I.

Department of Medical Chemistry, Molecularbiology and Pathobiochemistry

Director of the course:
Prof. Gábor Bánhegyi M. D., Ph. D., D. Sc.

Mandatory course
credit: 6
Second (Spring) Semester

Description of the curriculum

1. Eucaryotic and procaryotic cell, the genetic information.
2. Basic concepts of molecular cell biology, structure and function of nucleic acids.
3. The chromosomes and the organization of DNA.
4. The replication, repair and recombination of DNA.
5. Mobile genetic elements, viruses.
6. Transcription, RNA processing and modification, snRNA, hnRNA. The RNA world.
7. The genetic code and translation.
8. Posttranslational modification of proteins, folding and quality control.
9. Proteostasis, the ubiquitin-proteasome system, the types of autophagy.
10. The regulation of gene expression, nuclear receptors.
11. Transcriptional factors, DNA-binding domains.
12. Evolution of genes and the genome, epigenetics.

Textbooks
Lodisch, Berk, Kaiser, Krieger, Bretscher, Ploegh, Amon, Scott: Molecular Cell Biology
Alberts, Johnson, Lewis, Morgan, Raff, Roberts, Walter: Molecular Biology of the Cell

MEDICAL PROFESSION

Lecturer: Prof. László Kalabay MD PhD
Institute: Department of Family Medicine
Duration: One semester, lectures: 6x2 hours, practices: 6x3 hours/semester
Exam: Practical mark (written exam)
Second Semester

Thematic:
An overview of medical profession.
Formation of the consciousness of profession, personal careers.
The attitude of the medical doctor. Communication with colleagues and the members of the medical staff.
An overview of different levels of health care.
The organization, function activity of the clinical department and general medicine praxis.
Characteristics of the clinical work.
Overview of the scientific activity of the clinical department. Raising interest on joining to it.

Application: Péter Torzsa MD Tel: 355-8530 e-mail: ptorzsa@gmail.com
Application date: 30th January
Precondition: Only for students in the 1st year.

MEDICAL SOCIOLOGY

Semester: half class in the first semester and half class in the second semester

**The course consists of:** (lecture, seminar, laboratory exercise):
7 lectures, 7 seminars.

Course requirements, methods of monitoring:

To obtain signature for absolving the course students have to participate at a minimum of 10 classes. Participation is documented through catalogues. A midterm exam is taken after the 6th lecture. It is also required to submit a home paper or a class presentation in course-related topics by the end of the semester. The course ends with an exam; the grade may include the results of the midterm and the home assignment.

Supplement possibilities: based on the SE’s exam regulation.

Absence may be justified by a medical document at the next class. One seminar per semester can be supplemented by an extra assignment given by the teacher or attending the same class with another group.

Textbook:

2. Handouts for the lectures will be accessible on the homepage of the Institute of behavioural Sciences: www.magtud.sote.hu.

INTRODUCTION TO MEDICAL INFORMATICS

Institute of Digital Health Sciences

Type of the subject: 1 practice / week
code: AOVINF2441A
credit value: 1
Name of the lecturer of the subject:
Dr. Miklós Szócska

Teachers:
Dr. Tamás Iváncsy (PhD, lecturer)
Dr. Ádám Zoltán Tamus (PhD, associate professor)
Tamás Tóth (assistant lecturer)
Péter Dombai (lecturer)
Term: spring

The exercise of the subject in the realization of the aim of the education:
To introduce the students to the medical application of informatics, the characteristics of modern, integrated information systems with respect to quantitative aspects and to decision demands of the modern sciences. The medical informatics leans on methods of mathematics, statistics and computer sciences and it also includes from the different engineering, management and informatics procedures.

OPTIONAL courses:

I. SCIENTIFIC COMMUNICATION COURSE
The course gives an introduction to the paper based and oral publications and presentations. The students have to find a medical problem (a topic) to work out during the course.
2. Structure of a scientific publication. The importance and meaning of the sections of the paper. Structure of an oral presentation.
3. Scientific publication in practice: finding and evaluating information and creating paper and presentation on the selected topic.

II. DATABASES COURSE
The course gives an introduction to structuring and retrieving data using databases. The students perform practical examples of data management and query using a current software solution.
1. Introduction to database theory and data modelling principles (the application, logical and physical models, basic concepts and objects).
2. Data handling in practice: planning a relational database, managing tables and fields
3. Information retrieval from databases: the role and structure of queries, performing basic queries
4. Data management via user interfaces – basic concepts and principles

III. BIOMEDICAL SIGNAL PROCESSING COURSE
The students learn about the basics of biomedical signals, their acquisition, digital storage and processing. They perform practical analysis of selected signal examples.
1. Introduction to biomedical signal processing, objectives of signal analysis, Components of human-instrument system
2. Examples of biomedical signals (electrical and mechanical signals), and transducers.
3. The basics of signal processing, the digitalizing (sampling, Shannon-theory, quantization).
IV. PRESENTATION TOOLS
The course provides an overview of visual representation of medical information for various audience. The students learn the use of several related tools, and work up a selected topic.

1. Introduction to presentation techniques: How to make a good presentation? – technical and non-technical skills, best practices
2. Types of medical information, online information sources
3. Visual representation of information: word cloud, infographic etc.
4. Online tools for creating and sharing presentations

Requirements of participation of the lessons and the possibility of substitution of the absence:
According to rules of the Studies and Exam Code. The absence can be excused by the presentation of a medical certificate. Substitution is possible according to a discussion with the teacher.

The mode of the certificate in case of absence from the lessons and from the exams:
According to rules of the Studies and Exam Code.

The number, the topic, the time, the possibility of the substitution and improvement of checking during the term:
Acceptable solution of individual exercises.

The requirements of signature at the end of the term (including also the number and the type of the students’ exercises which are solved individual by them):
Suitable percentage of participation.

The mode of acquisition of the mark:
Practical exercise

Type of the exam: –

Exam requirements: –

Mode of the application for the exam: –

Order of the modification of exam application:
According to Studies and Exams Code.
Mode of the certification in case of absence from the exam:
By a medical certification within three days.

List of lecture notes, course books, study-aids and literature which can be used to acquisition of the syllabus:
1. The use of educational materials on the institute website is obligatory: www.semelweis.hu/dei

FIRST AID
Tutor: Dr. Hajnalka Mészáros

Topics

BLS (Basic Life Support)
BLS
AED (Automated External Defibrillator). PAD (Public Access Defibrillation)
BLS + AED (management of situations)
BLS + AED (Management of situations)
Fractures, dislocation, sprain. Slings.
Poisoning. Drugs. Drunkenness.
BLS

**Note:** Participation at 75% of practices is necessary. Compensation of absences is possible in subsequent practices.
Development in learning skills will be controlled all the time during the practices in the semester.
Mode of certifying absences: oral – referring to practices
Requirements: The student should be able to recognize emergencies, and call for help start with BLS + AED provide airway management in unconscious patients provide first aid for patients complaining for chest-pain, shortness of breath, signs for hypoglycaemia and having suffered from fainting, shock condition, convulsion, injuries.
The performance of the above mentioned requirements at the last practice will be evaluated with “accepted” or “not accepted”.

**TERMINOLOGY OF MEDICINE (1st semester)**

**Responsible organisational unit:**
Faculty of Health Sciences, Division of Foreign Languages and Communication

**Programme director:**
Zöldi Kovács Katalin PhD, Head of the Division

**2 lessons per week, 2 credits**

**Assessment:** 3 written tests

**Role of subject in fulfilling the aim of training:**
Students get familiarized with the Latin and Greek terminology of medicine in order to facilitate the acquisition of other subjects. Special focus is dedicated to anatomy, physiology, pathology and pharmaceutics. Furthermore, the course provides an introduction into general scientific terminology.

**Brief description of subject:**
The main aim of the subject is:
1. to acquire a knowledge of about 500-600 Latin words and phrases as a minimum vocabulary (basic vocabulary of medical and scientific language),
2. the correct application of
   a) anatomical names,
   b) names of diseases
   c) names of drugs,
3. to understand diagnoses and prescriptions;
4. to learn about abbreviations used in prescriptions.
5. to be able to make a clear distinction between medical terms of English and Latin/Greek.

Course content of practical lessons:
1. Grammar:
   *Nouns*: the 5 Declensions
   *Adjectives* - construction of the most important attributive structures with the vocabulary of anatomy, clinical subjects and of pharmaceutics.
   *Prepositions* (in anatomical, clinical and pharmaceutical phrases)
   *Numerals*: Usage on prescriptions.
2. Texts containing:
   a) anatomical names;
   b) clinical and patho-anatomical diagnoses;
   c) prescriptions
3. Vocabulary

Latin and bilingual (Greek-Latin) nouns, adjectives, numerals and prepositions used in anatomy, the clinical subjects and pharmaceutics;

Course material, recommended text book(s), professional literature and supplementary reading(s)

**Basics of Foreign Language (module 1.)**
Magyar orvosi szaknyelv 1.

**Responsible organisational unit:**
Faculty of Health Sciences, Division of Foreign Languages and Communication
Programme director:
Zöldi Kovács Katalin PhD, Head of the Division
4 lessons per week, 4 credits,
Assessment: end-term written and oral exam

Role of subject in fulfilling the aim of training:
The role of this subject is to help students acquire the basic vocabulary, grammar and language skills they need for the effective communication in the language they use during their field practice both in their everyday life /'survival language'/ and in their academic studies. Raising students’ awareness of cultural differences is one of our top priorities.

Brief description of subject:
The first three modules are dedicated to learning basic general vocabulary and grammar. In the first module students acquire basic structures and the vocabulary for everyday topics / e.g. shopping, food, housing etc./, language for „survival.”. The course places special emphasis on phrases essential for everyday communications, e.g. introductions, greetings, getting/giving information etc. Grammar is of less importance in this phase of language studies.

Course content of practical lessons:
Lesson 1-2: The alphabet
Lesson 3-4: Greetings
Lesson 5-6: Where are you from?
Lesson 7-8: Introducing people
Lesson 9-10: Numbers-phone numbers
Lesson 11-12: What time is it?
Lesson 13-14: Practising telling the time
Lesson 15-16: Days
Lesson 17-18: When do you study?
Lesson 19-20: What is it? - food
Lesson 21-22: Consolidation
Lesson 23-24: Test 1 + situations
Lesson 25-26: What is the food like? - adjectives
Lesson 29-30: I would like a tea
Lesson 31-32: Shopping for food
Lesson 33-34: Ordering food in a café
Lesson 35-36: Rooms in the flat
Lesson 37-38: Furniture in the rooms
Lesson 39-40: Where are the furniture?
Lesson 41-42: As a guest
Lesson 11-12: At a party
Lesson 43-44: Where can I find the library?
Lesson 45-46: When shall we meet?
Lesson 47-48: Asking for information, setting programs
Lesson 49-50: Places in the city
Lesson 51-52: Consolidation
Lesson 53-54: Test 2 + situations and communication practice
Lesson 55-56: Assessment

Course material, recommended text book(s), professional literature and supplementary reading(s)

Basics of Foreign Language (module 2.)
Magyar orvosi szaknyelv 2.

Responsible organisational unit:
Faculty of Health Sciences, Division of Foreign Languages and Communication

Programme director:
Zöldi Kovács Katalin PhD, Head of the Division

4 lessons per week, 2 credits,
Assessment: midterm (written) and endterm (written and oral) tests

Role of subject in fulfilling the aim of training:
The role of this subject is to help students acquire the basic vocabulary, grammar and language skills they need for the effective communication in the language they use during their field practice both in their everyday life /'survival language'/ and in their academic studies. Raising students' awareness of cultural differences is one of our top priorities.
**Brief description of subject:**
The first three modules are dedicated to learning basic general vocabulary and grammar. In the second module students acquire basic structures and the vocabulary for everyday topics (e.g. family, relatives, at the doctor’s etc.) language for “survival”. The course places special emphasis on phrases essential for everyday communications, e.g. likes, dislikes, offering help, etc. Grammar is of less importance in this phase of language studies.

**Course content of practical lessons:**
Lesson 1-4: Forming questions
Lesson 5-6: Plural forms
Lesson 7-8: What do you like doing in your free time?
Lesson 9-10: I would like to……
Lesson 11-12: Communication skills
Lesson 13-14: A date – what do you like?
Lesson 15-16: I like dancing, swimming etc.
Lesson 17-18: I can ride a bike, drive etc.
Lesson 19-20: Communication practice
Lesson 21-22: Can I help you? In a clothes shop
Lesson 23-24: Can I give you something else?
Lesson 25-26: Communication practice
Lesson 27-28: Consolidation
Lesson 29-30: Test 1 + situations
Lesson 31-32: I have a headache – at the doctor
Lesson 33-34: At the chemist’s
Lesson 35-36: Communication practice – at the doctor, at the chemist’s
Lesson 37-38: My family, family members
Lesson 39-40: Family relations
Lesson 41-44: Communication practice- introducing your family
Lesson 45-48: My boss’ wife – social relations
Lesson 49-50: Consolidation
Lesson 51-54: Test 2 – situations, communication practice
Lesson 55-56: Assessment

**Course material, recommended text book(s), professional literature and supplementary reading(s)**
COMPULSORY SUMMER PRACTICE

Nursing Course - 1 month, 170 hours

Proof of completion (Certification of completed famulus practice) must be submitted prior to registration to the next academic year. Students who do not submit the certificate of completion on time will have their registration placed on hold until the proof of completion is received by the English Secretariat. Certificates can be downloaded at http://www.semmelweis-english-program.org/index.php?option=com_content&task=view&id=79&Itemid=101

Please read more about the rules concerning the criteria of selecting the foreign clinical practice positions and accepting the practice period spent abroad: http://www.semmelweis-english-program.org
