INTERNAL MEDICINE II.
2023/2024 II.
Neptun code: AOKBHK783_2A

Reflection on the implementation of the previous period's action plan ("implementation review"):

We try to further increase the ratio of the practical lessons and provide more time to practice and physical examination skills.

Our feedback on general comments by the students:

The students evaluated the subject around the average of the faculty.

Our feedback on specific comments on mandatory subjects:

Students's comments	Responses
It was enjoyable and we managed to learn new things but could be better with the discussion part	
A lot of the doctors were unfortunately very late to the practices, and since they are not that long to begin with we ended up with very short practicals	Sorry to hear this. Colleagues are pushed to be in time for the practices through an application
Lectures should have been earlier on the block	Reorganisation of the time table is ongoing
Rheumatology days were too long	The rheuma hours were decreased
Great block. Hematology classes were very good. I wish we had more infectology seminars/practices as it was highlighted at the beginning that it is very important. Lectures at the rheumatology clinic were useful but we had similar lectures here at the department too, so it was a bit too much	We try to decrease the parallelisms
It was interesting and what I loved the most is that it was well organised. I love that we were in small groups and had a chance to work in small groups. I found bed hunting a little bit not useful in a way that maybe it would have been better to have check ups with teacher and his explanation. Maybe it is possible to have 1-2 interactive classes with group works and tasks for theoretical knowledge & research like Hodgkin & match the symptoms to types, etc. garently liked this block and found useful	Thanks. We are working on more interactive classes
I hope we have more chance to see the patients	we strive for it
No absences and so many mandatory lectures took a lot out of us, Most of us learn theory from	The theoretical classes are seminars and they are mandatory

none mandatory for the next students Except that practicals were great	
I hope there is a table in the lecture room. My spines are destroyed by this, having Psychiatry, Pediatrics, Internal medicine in a row, which lack of table in the lecture room.. Me and my classmates are suffering from severe chronic neck and back pain at the end of this block..	Acquisition of new chairs w/tables are ongoing

Budapest, 20. September 2024.

The action plan was compiled by:

Prof. Dr. Tamás Masszi

Dr. Katalin Keltai
