

Action plan based on the student feedback received in the second semester of the 2023/24 academic year (FOKOELT349_2A)

Department: Department of Physiology

Faculty: Faculty of Dentistry

Our feedback on general comments by the students:

We have received the results of the online submitted questionnaires by the students about our teaching. According to the provided data, our teaching was generally appreciated by the students and our scores were basically similar (significantly not different) to those of Faculty averages.

Our feedback on specific comments on mandatory subjects:

We received few comments and recommendations from our students in the evaluation documents. The majority of textual comments were positive, with many students praising our practical teachers and lecturers.

One student suggested reducing the length of the Medical and Dental Physiology courses, proposing that they be condensed from two semesters into one. However, we believe that a thorough understanding of human physiology is fundamental to both medical and dental practice, and it is not feasible to cover this essential material within a single 14-week semester.

Additionally, a comment regarding two specific lecturers will be addressed through direct, in-person discussions to ensure improvements are made.

Reflection on the implementation of the previous period's action plan ("implementation review"):

We have taken steps to address many of the suggestions provided by our students in the previous year. It's worth noting that the weekly test system had been previously criticized in last year's feedback as well. In response, we have communicated with our teachers, urging them to emphasize the significance and purpose of the weekly tests within the context of the Medical and Dental Physiology course for the students, and no further critiques have been raised regarding this aspect.
