

Action plan based on the student feedback received in the II semester of the 2020/2021 academic year

Department: Department of Prosthodontics

Faculty: Faculty of Dentistry

Our feedback on general comments on mandatory subjects by the students:

Odontotechnology and Prosthodontics Preclinical II.

Students comment:

Please renew the moodle material and indication weekly, and show the requirement of assignment clearly at the beginning of the class.

Answer of the Department:

In the moodle system we have uploaded any auxiliary curriculum that can complement the practises. However, this does not mean that students do not have to master the curriculum in practise.

Students comment:

during practicals only two teachers help the rest sit and play on their phones

Answer of the Department:

During the practical education, we try to develop student's independent manual skills. It is the responsibility of the students to master the clinical and dental work phase. The task of the teachers is to help the students after the presentation of the theoretical background and after the presentation of the presentation cases, but not to perform the task instead.

Prosthodontics III.:

Students comment:

Too many lectures are sacrificed for Fabjan fereidy classes, when in truth the original english article is kept hidden. Per say, when an author describes something.. he does it at its best. This means that for an englishspeaking student like myself, reading proper descriptive articles helps me a lot.

Answer of the Department:

The theme of the lecture and all the lectures will be updated on 2021/22. school year. We adapted the material of the lectures to the textbook, we took into account the students' requests and needs in the development of the topic. Fewer lectures will focus on the FF classification

Budapest, 31.08.2021.
