

Action plan based on the student feedback received in the 1st semester of the 2025/2026 academic year

Department: Genetics, Cell- and Immunobiology

Faculty: ED Basic Immunology FOKOGEN347_1A

Lectures:

The feedback results for the course Basic Immunology (lectures) are above the faculty average in all categories.

Number of students, who filled the OMHV evaluations prior to registration for the exams is 86 out of 153.

Here I put the comments of students, at the last lecture:

„The lectures being incentivised by points is an incredible idea, and incentivises paying attention to the lectures. I really like the structure of the course”

- *„The teaching was really useful*
- *„The instructor was incredibly passionate and that came through in her explanations as well”*

The bonus system we developed earlier works well: during the semester , students can collect up to 20 points through 3-point mini-tests at the end of the lectures. Adding the midterm points to it, students who achieved 45 points were offered the opportunity to take a simplified exam. A total of 28 students exceeded the threshold for the simplified exam.

Practices:

The feedback results for the practices of Basic Immunology course are above the faculty average in all categories.

Our previous initiative — holding practical sessions not every week for 45 minutes, but every other week for 2 × 45 minutes — has led to a clear improvement in the quality of teaching.

This is also reflected in student feedback; a few comments:

„Very organised class! Very helpful with the board drawing instead of just a plain presentation!”

„Explanation is very detailed and understandable”

We appreciate the kind words recognizing the pedagogical work of our teaching staff

In the future, to help students learn the practical material more effectively, we will upload weekly practice tests based on the previous week's material to the course Moodle platform after each practical session.

Date: 2026. 03. 20.
