Project Management Professional

Project management consultancy service

Starting September 2023

The Workgroup for Science Management of Semmelweis University introduces new project management consultancy services, primarily for PIs, group leaders and young researchers

Why is project management beneficial for you?

The goal of the Ph.D. student and the supervisor is to successfully obtain the degree by the end of the doctoral training program. This 4-year mutual commitment between the two parties should be considered as a complex project. We recognized that the support of the right project management professional has a huge benefit for supervisors and students alike.

By applying internationally proven project management methods and approaches, our research groups can operate more effectively and efficiently, thus increasing both the likelihood of obtaining a Ph.D. degree in time and the competitiveness of research groups in general.

Target audience

Young research group leaders and supervisors for whom basic management skills are essential in their day-to-day work. For colleagues who often face organizational and managerial challenges that they have not had the opportunity to prepare for during their careers, but bearing the responsibility to lead.

How can the consultation service help you?

To become a more effective project leader, and to develop good work management practices: hold effective meetings, meet deadlines, always know team members' responsibilities, learn to delegate, and increase employee retention within your team.

Complete service list on the next page.

Project management in practice

Available services through the Workgroup for Science Management

- General project management consultation reflecting on a problem or challenge raised by the Ph.D. student, the supervisor, or the research group leader
- Project planning and monitoring
- Strategic planning, setting annual and quarterly targets
- Ensuring the effectiveness of day-to-day work, work schedule
- Agile transformation
- Priority and change management
- Tendering and grants
- Individual or group training: correct PM practices

Our aim with the consultancy service is to connect young research leaders with project managers who are committed to increasing the effectiveness and competitiveness of research and supporting Ph.D. students to obtain their degrees.
