

Action plan based on students' feedback regarding the 1st semester of the 2023/2024 academic year

Department: Department of Molecular Biology
Faculty: Faculty of Dentistry
Compulsory subjects: Medical Chemistry; Molecular Cell Biology I
Elective subjects: Basics of Medical Chemistry

1. Response to the general comments:

We thank our students for sharing with us their opinion on the activity and performance of the department. We appreciate a lot that the majority of those students who enrolled in our compulsory and elective courses felt it important to give us feedback.

The scores regarding the compulsory courses correspond the Faculty average, and we are pleased to see the improvement compared to previous years. Hopefully, this is recognition of our efforts to improve molecular science education for dental students. In particular, Basics of Medical Chemistry has received compliments, which we see as further support for our commitment to provide help to students with weak chemistry background.

2. Response to specific comments on compulsory subjects:

Thank you for appreciating the proficiency and helpfulness of lecturers and lab teachers.

3. Response to specific comments on elective subjects:

None received.
