# Crisis intervention. Detection and psychotherapy of suicidal intentions

Lajos Simon

2016.

## Historical roots

- 1. Emergency psychiatry as a part of emergency medicine
- 2. Prevention of hospitalisation

## Crisis and Psychiatric emergency

• Psychiatric emergency is an urgent and usually unexpected situation

• Emergency psychiatrists must be up-to-date on medicolegal issues and managed care

• The crises according to Lindeman(1944), Jacobson(1980), Caplan(1964) and Erikson(1970) are non-specific states of brief duration, characterised by distress, worry, tension, often with feelings of hopelessness, helplessness, sadness and futility

# Three types of patients need acute psychiatric/psychosocial help

- Patients with acute psychiatric symptoms needing urgent medical attention (acute psychosis)
- Clients in acute psychosocial crisis
- Chronic psychiatric patients living in the community

• "Chronic" crisis patient

## The process of crisis intervention

- 1. Initial contact/point of entry
- 2. Assessment of the problem
- 3. Transference/referral
- 4. Therapeutic intervention
- 5. Provision for aftercare

## Crisis intervention

- 1. The method used to offer immediate
- 2. Short-term help to clients
- 3. It aims to reduce the intensity of an individual's emotional, mental, physical and behavioral reactions to a crisis
- 4. A major focus of crisis intervention is exploring coping strategies
- 5. Another central focus of crisis intervention is problem solving (Cognitive Behaviour Therapy CBT)

#### Suicide

• is not an illness

• is not a mental disorder (DSM-5 does not classify it among the diseases)

• is often the consequence of a mental disorder (i.e. Depression, Schizophrenia, Alcohol and Drug dependence)

#### Detection of suicidal intentions Pre-suicidal Syndrome

Erwin Ringel 1949. - survey of 745 saved suicidal survivors

- Perspectives narrowed
- Supressed aggression and aggression aimed at the person's own personality
- Fantasies about suicide

•

"Cry for help" (Farberow 1961.)

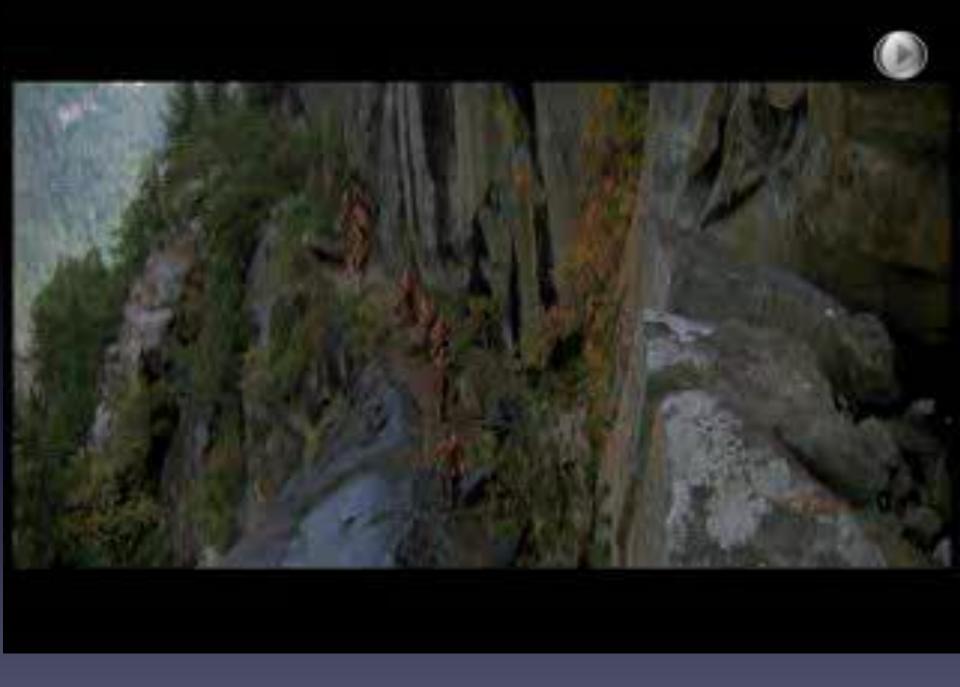

### Narrowed perspective

• Situational narrowing – decreased number of options

• The individual feels that all his possibilities and aims in life are beyond reach

## The last of the Mohicans (1992.) 4:14 Director: Michael Mann

 Alice belongs to those who undertake death because she is afraid of a possible anguish and suffering. Her only hope was Unkas, who could have provided a way out for her but died in front of her eyes..

## Dynamic narrowing

• Rigid thinking, distorted information processing

• Fixated behaviour patterns, impaired ability to react

• Emotional narrowing (Time is fixated and the moment becomes an eternity for the individual)

• Increased inhibition of aggression

## Decreased human relationships

The cause of total isolation can be:

- Real
- Experienced
- Chosen
  - solitude
- Depreciation/debasement of personal values by:
  - Appreciation and reception of values is decreasing gradually
  - many areas of life lose their value
  - the value estimation of a certain act or thing becomes inadequate

Suppressed aggression or directed towards the individual's own personality

- anger directed against oneself
- aggression is insufficiently directed outside
- missing human relationships the aggression has no reachable/accessible object

## Suicidal Fantasies (Pre-suicidal symptoms)

- The concept of death emerges and the individual visions him\herself dead
- The next vision is that the individual kills herself

• The method of suicide is selected

• The concrete execution plan of the suicide

## "Cry for help" - the last opportunity

## **Risk Factors of Suicide I.**

- 1. Stress generating events and situations
  - the death of a loved person
  - divorce, split up

ullet

 $\bullet$ 

 $\bullet$ 

ullet

ullet

 $\bullet$ 

- sudden unemployment
  - grave disease
  - bad treatment
  - professional stress
    - role conflicts

#### Risk Factors of Suicide II.

- 2. Changes in mood and thinking
  - sadness

ullet

ightarrow

- frustration
- anger
- disgrace
- hopelessness
  - dichotomous thinking

## Risk Factors of Suicide III.

3. The use of alcohol and other drugs

• 60% of people committing suicide are under the influence of alcohol (Suokas, Lonnqvist, 1995.)

4. Mental disorders

5. Following models Ferenc Moksony: Is there a geographic subculture of selfdestruction?

## Therapy after the suicidal attempt

• Medical aid/intervention

• Medication treatment

• Psychotherapy

## Aims of the Therapy

• keep clients alive

• help the patient to eliminate suicidal thoughts

• improve the patient's self-efficacy in order to handle stress and problems more effectively

## Types of therapy

- cognitive and behavioural therapy
- dynamic therapies
- person centered therapy
- group psychotherapy
- family therapy

## **Preventing Suicide**

• USA Suicide preventing programme since 1955

• England – Samaritans' programme

• S.O.S. telephone service

Centre for Preventing Suicide Los Angeles (methodological modell)

- Developing an intimate relationship
- Understanding and clarification of the problem
- Ascertaining the level of endangerment
- Mobilizing the caller's resources
- Elaboration of a therapeutic plan

## Pro-life Arguments, Motivation Systems

- Belief in survival and in coping
- Responsibility felt towards the family
- Taking care/nurturing children
- Fear of suicide
- Disapproval of the community and social denouncement
- Moral objections

## Thank you for your attention!
