

Melodikus intonációs terápiás gyakorlatok súlyos afáziások számára

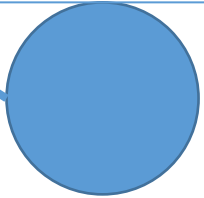

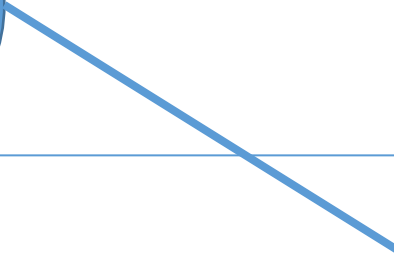

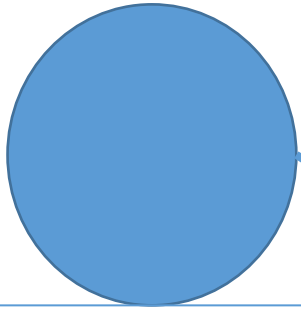

Semmelweis Egyetem
Rehabilitációs Klinika

- Készítette: Fekete Zsófia
- 2017. június

- Minden éneklés először a terapeutával, beteggel közösen történik.
- Minden kifejezést többször el kell ismételni.
- Első 1-2 alkalommal csak “M” zöngével a beteggel közösen kell eldúdolni a dallamsort.
- Kényelmes hangmagasságot kell választani.
- Minden szótaghoz mozgást, akár koppantást érdemes társítani, a nagyobb hangsúlyokhoz nagyobb mozgást, a kisebb hangsúlyokhoz kisebb mozdulatot.
- Utána szöveggel közösen szükséges elénekelni.
- Amikor már a beteg stabilan éneklő a szöveget, a segítő fokozatosan kiszállhat az éneklésből és a mozdulatokból.
- A cél, hogy a beteg a végén önállóan is el tudja énekelni, majd mondani a szöveget.
- Többszöri gyakorlással, a dallam és ritmus segítő erejének fokozatos elhagyásával vissza tud térni a köznapi beszédprozódiaira.
- A begyakorolt szövegek közötti váltás alatt előfordulhat az előző szöveg perszeverálása, ezt a terapeutának figyelni kell.
- A terápia eredményességének legfontosabb feltétele a beteg és a terapeuta között kialakuló kapcsolat és a rendszeresség.
